| Technology | VB.NET, Dreamweaver, SQL Server |
| Period of Project | July 2006 to October 2006 |
| Project Status | Stage 1 Completed. Stage 2 development in progress |
| Total Effort | 6 person months |

Golferholics is a site for golf aficionados and people interested in getting information about golf courses. The site has been developed for a client in Australia but will cater to golf enthusiasts from all over the world. Design of the web site and Development was done ground-up and requirements given in Excel sheets were elaborated and fine-tuned through an iterative process to develop the web site.

Extensive information about golf courses is provided, and user registration is available at two levels – free membership and a Golferholic membership. The web site provides an elaborate rating facility for the golf sites, with ratings given for individual sections, displaying of average ratings and displaying ratings of Golferholics web site. Banner management has also been provided so that pages which are specific to a golf course can display the banner specific to the golf course.

Future versions of the site will have tournament information, member privileges and rewards, and many more features.

Key challenges in the project were challenges to understand the world of golf and to elaborate the requirements and design the site to meet the Excel requirements.
